26. AVG has directly infringed, and continues to directly infringe one or more claims of the '466 Patent in this judicial district and elsewhere in Texas, including at least Claims 1, 2, 7, 15 and 22, literally and/or under the doctrine of equivalents, by or through making, using, importing, offering for sale and/or selling its software licensing and delivery system during the

33. AVG has directly infringed, and continues to directly infringe one or more claims of the '766 Patent in this judicial district and elsewhere in Texas, including at least Claims 1, 3, 7, 9, 13 and 15, literally and/or under the doctrine of equivalents, by or through making, using, importing, offering for sale and/or selling its software licensing and delivery system during the pendency of the '766 Patent which software and associated backend server architecture *inter alia* allow for maintaining user policy based license management information for application programs at a server, receiving a request for a license at the server, determining license availability based on the policy information, and providing an indication of availability or unavailability.

34. In addition, should AVG's software licensing and delivery system be found to not literally infringe the asserted claims of the '766 Patent, AVG's accused products would nevertheless infringe the asserted claims of the '766 Patent. More specifically, the accused software delivery system performs substantially the same function (making computer games/software available for digital download/management), in substantially the same way (via a client/server environment), to yield substantially the same result (providing authorized games/software to a client for execution).
